

Using an Ozone Earscope

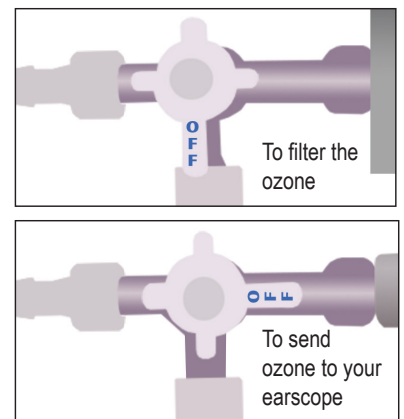

With Humidification

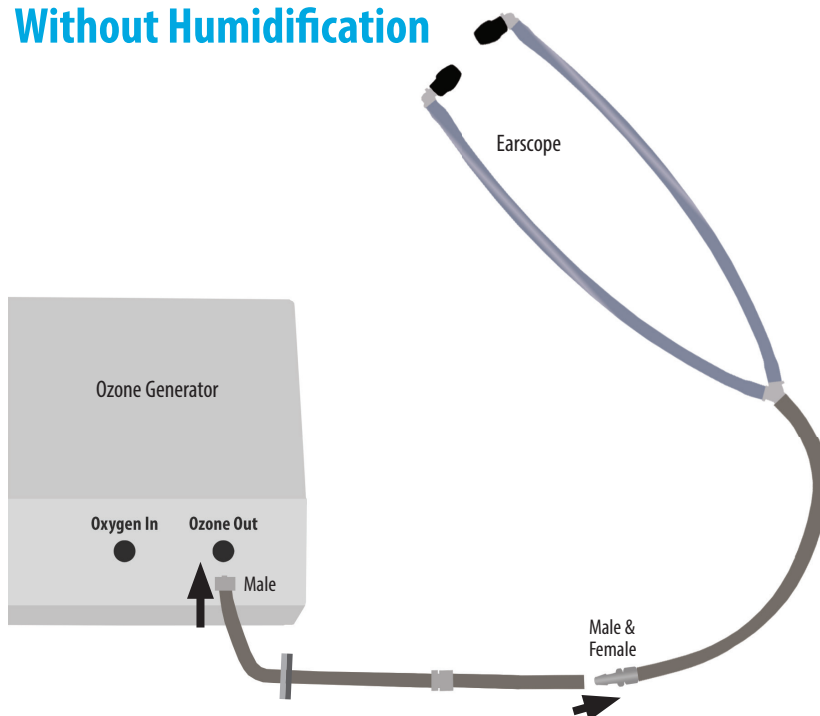

1. Connect the barbed end of the Luer lock on the earscope to a piece of tubing, then slide the other end of the tubing onto the ozone destruct as shown.

2. Place the earscope so the ear buds rest loosely in the ears. Do not seal the opening to your ear canal. You want a small air gap.

3. When you're ready for the ozone to flow, turn the Off dial on the destruct facing toward the destruct system.

Without Humidification

You can use your earscope by attaching the male Luer lock directly to the ozone generator.

Connect the barbed end of the Luer lock on the end of the earscope to a piece of tubing attached to the check valve kit coming from the ozone generator.

We recommend using a humidifier so the ozone isn't as drying. If you don't have a humidifier, we recommend lightly moistening the ear (do not allow water to flow into the ear canal).

◆ You can also use a multi-chambered insufflation bag with an earscope (see image at right). See page 8 for how to use the bags.
