

# Ozone Generators

Ozone Generators are the central component of any ozone therapy system. A lot of advances have taken place over the years, leading to the best, most efficient machines available. With a high purity oxygen feed, you can create ozone suitable for practically any application. Here we'll try to answer all of your questions.

## What is cold ozone production?

Cold ozone production creates no excess heat and supplies stable ozone concentrations at a wide range of oxygen flow rates. This concentration won't diminish over time. Cold ozone technology using ceramic cells creates stronger, more efficient ozone production with minimal voltage. Efficient ceramic cells make hardly any noise, while other types of machines can be

bothersome. Ceramic cells are more efficient and durable than glass, which can create a lot of unwanted noise and heat. The O3Elite Dual and O3Elite Single use ceramic cells, custom made in the USA, with cold ozone production. That means better ozone with less of the things you don't want.

## What makes the O3Elite special?

Both O3Elite models come with a lifetime warranty and the one-on-one support you should expect. Promolife will not abandon you after you receive your equipment. We are always willing to make sure you get the most out of your equipment, through email, over the phone or via Skype. We also provide instructional videos on how to set up the equipment.

## Each unit comes with:

Ten feet of silicone tubing with Luer lock adapter, ten feet of oxygen tubing with Luer lock adapter, three silicone adapters, three PVDF Luer fit adapters, Promolife Ozone DVD, instruction manual, ug/ml gamma chart, power adapter, ozone resistant check valve, Luer lock caps, wall mounts and a lifetime warranty.

*Here are some other special features of the O3Elite:*

**Made in the USA** - all parts are manufactured in the US and units are thoroughly checked by us by hand before shipment.

**Universal voltage** - use it anywhere in the world without a step-down transformer.

**Dual quiet, efficient ozone cells** - ultra pure ozone without the noise created by other machines.

**Ceramic ozone cells** - just as ozone resistant and ultra pure as glass but without the potential burnout. Custom made in the USA.

**Luer lock connections** - tubing locks on securely with no slip.

**Cold ozone production** - no heat that degrades the ozone; cold corona; no need for cooling fans.

**Ultra pure ozone** is created using very low voltage, which is safer for you.

**Cleanable ozone cells** - no need for costly replacements.

**Independent cells** - run individually or together for more options.

## More specifications for both O3Elite models

- Thick painted aluminum body
- Check valve - keeps water from entering the machine.
- Wall mount holes - set it on a table or hang it.
- Easy maintenance
- VDC Universal Power
- Made in the USA
- Input 100-240 volts, 50/60 Hz, 1.5 amps
- Voltage 12 VDC

Promolife offers the best support in the industry, before and after the sale. We can help you find exactly what you need. Use our instructional videos to set everything up quickly. We are also available by phone, email or Skype for all your questions.

- Oxygen feed required
- 3/16" inner tube size; 5/16" outer tube size
- Dimensions: 10"x7.5"x3"
- All ozone-resistant components

### O3Elite Single

**\$799.00**

Ozone output up to 70 ug/ml

Ideal for insufflations, bagging, ozonating water, breathing ozone bubbled through oil, cupping and most other applications.

Single cell and dial. Comes with gamma chart that shows you how to set your oxygen and ozone generator to get the strength you desire.

### O3Elite Dual

**\$1195.00**

Ozone output up to 110 ug/ml

Ideal for the same applications as the single as well as for use with steam or far infrared saunas. Higher strength allows water and oil to saturate faster.

Dual cells can be used independently. Use one dial for lower concentrations or both for higher concentrations. Comes with gamma chart that shows how to achieve any output.

## How do I order?
