

Oxygen Sources and Ozone Therapy

A high quality oxygen source is necessary for ozone therapy. All medical-grade ozone generators must be fed by an oxygen source, either an oxygen tank or an oxygen concentrator.

Regardless of the source, you must be able to use very low flows of oxygen, typically between 1/32 and 1 LPM. With a tank, this requires a low flow regulator. Some concentrators come in low flow configurations, but for high flow units, you'll need an external regulator like the PreciseRX. Why? To create ozone, oxygen must have longer contact time inside the generator. The lower the oxygen flow, the higher the ozone output.

Oxygen Tanks

Oxygen tanks provide pure oxygen and are ideal for those who need the highest quality ozone or desire the most precise measurement. Low flow regulators allow you to reach the lowest possible oxygen settings for the widest range of ozone output.

870 tanks are medical tanks and require a prescription to fill. 540 tanks are industrial and can be filled at a local source. You'll want to check around your area for an oxygen provider to see what their rules are. Some require that you buy one of their tanks. If this is the case, you can still get a low flow regulator so you can use it with ozone therapy.

Low Flow Regulators for O2 Concentrators

If you have a high flow oxygen concentrator and only need a way to lower the flow rate, the PreciseRX Flowmeter is what you need. You can adjust range in 1/16 LPM increments and avoid making permanent modifications to your concentrator. It prevents back pressure into the O2 concentrator. This flowmeter cannot to be used with high pressure oxygen concentrators.

PreciseRX Flowmeter.....\$299.95

Promolife offers the best support in the industry, before and after the sale. We can help you find exactly what you need. Use our instructional videos to set everything up quickly. We are also available by phone, email or Skype for all your questions.

Oxygen Concentrators

Refurbished Devilbiss Low Flow Oxygen Concentrator

This refurbished concentrator has built-in flow rates of 1/8 to 2 LPM, with 93-95% concentration. It's quieter than some other models and comes with a two year limited warranty on parts and labor. It's a highly dependable unit that can be used for almost any ozone application. The four castors make it easy to roll it into any room.

Specifications

Power Consumption: 310W

Dimensions: 35" H x 14" W x 12" D

Weight: 55 lbs

Devilbiss Low Flow Oxygen Concentrator.....\$699.00

EverFlo Oxygen Concentrator

The EverFlo is a brand new unit, weighs only 31 pounds, and gives you 93-95% pure oxygen. With flow rates up to 5 LPM, you can use this as a high output concentrator or attach the PreciseRX Flowmeter for low flows needed for ozone therapy. The concentrator has a five year warranty, or you can choose a refurbished unit with a two year warranty.

Specifications

Power Consumption: 350W

Dimensions: 23" H x 15" W x 9.5" D

Weight: 31 lbs

New EverFlo with Flowmeter.....\$1295.00

Refurbished EverFlo with Flowmeter.....\$799.00
